2

3

$\vdots$

x_n

y'

y

$$y' = wx + b$$

linear

$$y = \phi(y')$$

nonlinearity

VISHWAS SINGH

PROGRAMME LEADER

How does it work.

Very less

$$\boxed{0.0156} + \boxed{0.0001}$$

w b

$$\boxed{0.0157}$$

↓ / Map

to a range
Activation
function

- (i) Neuron calculates bias & weights
feed forward $\rightarrow$ no corrections
back propagated $\rightarrow$ correction for least error
- (ii) Mapping to range of values using
activation function $\rightarrow$ Neuron
- (iii) In an ANN $\rightarrow$ 3 or more layers of
such neurons

0 → 1 → Col 1
0 → 10, 00, 000 → Col 2
